## PUBLIC NOTIFICATION

### TEMPORARY MODIFICATIONS OF DISINFECTION TREATMENT PROCESS

August 8, 2022, through August 29, 2022

**Residents of: City of Everglades Drinking Water System**

U.S. Water Services Corporation will be temporarily converting its disinfectant process from chloramines to free chlorine residual beginning 8:00am, Monday August 8, 2022, through August 29, 2022. This is a routine measure to ensure customers clean and safe potable water.

**If you are on home dialysis, we encourage you to contact your physician or dialysis provider to make sure you understand proper steps you should take, or aquatic species are advised to contact a professional aquarist to avoid any problems associated with chlorine.**

This process will not cause adverse health effects. However, during this period, you may notice some discoloration and or cloudiness in your water. You may also find air pockets in the system. The discoloration and air are harmless. If you do experience this, you may want to run water through the tap until it runs clear. Some areas may also experience a temporary fluctuation in water pressure or a slight increase in the taste and odor of chlorine.

For questions regarding the change in the disinfectant process, please contact US Water Services at 866-753-8292
